Utilizing Terra Tools for Rapid Construction of Synthetic Natural Environment Databases

- Relevance to STRICOM public:
All engineers involved with programs or projects which require synthetic environment databases will be interested in this commercial tool and how it can aid development of SNE databases to support internal and external research and development activities.
- Terra Tools: A database construction tool which allows the user the following capabilities:
Database generation using process Flowgraph GUI
Inspection and editing of source geo-spatial data
Rapid incremental recompilation
Just enough GIS automatic processing
